

N-LINE

The entry level model for professional full body therapies. No compromises were made with this already proven design.

Features:

- Real-time dosimetry
- Oval cabin layout for uniform exposure
- Low-noise ventilation system
- Low running costs
- Fast and effective treatment with only 28 UV tubes

performance

The reliable solution for professional full body treatments. Equipped with 28 powerful UV tubes this cabin supplies top-class efficiency and short therapy times.

smart Design

A highly accurate dosimetry system, the unique lamp arrangement and an optimised oval cabin layout that matches the human body; this cabin is setting new standards.

safe investment

Not just the perfect entry level cabin but also a safe long-term investment. With only 28 tubes, the N-LINE is a real money saver when it comes to maintenance and running costs.

N-LINE

oval cabin shape for an uniform radiation

minimization of prime and operating costs

smart arrangement of the tubes semicircular in a curve downwards

also suitable for taller patients (2m)

maximization of efficiency of the lamps through aluminum reflectors

generous sense of space

special electronic starter extend lifetime of the lamps

galvanic zinc coated steel with powder coating – prevent rust

power saving through shorter treatment times by maximal efficiency

reduced entry of dust and deposit on the lamps and acrylic glass

low energy use and low operating costs

low noise

inspection window

pauses automatically by opening the door

fourfold real time dosage from the top

impact-resistant acrylic glass protects the lamps and can be easily removed for cleaning

microcontroller drive in robust industry quality

SPECIFICATIONS

Power supply: 230 V, 50 Hz

Power consumption: 3200 VA

Dimensions(WxDxH): 121 x 114 x 214 cm

Weight: 275 Kg
